

Established new github, google drive

Everyone is going through Django tutorial

Meeting times of Monday 7:30pm and Wednesday 4pm established. Team is split on who attends which meetings. Scott attends both.

Digital Ocean droplet created (iron.bigevil.net) Django about 80% configured. Having trouble getting it fully working.

Tasks for upcoming week:

- **Emily and Sara:** Learn to show Google Map on html page. Learn to capture images from camera/browser. Learn to collect location from browser.
- **Adam:** Django ORM. Create basic 'trash' model from our prototype ERM, include everything we might need to save and fetch that data for display on a map. Learn how models are created from complex table joins. Can we create models based on an existing database schema?
- **Luca and Teddy:** Learn to create Django endpoints with the goal of an image upload end point that saves image and trash data to the database.
