

We can enter data into the database and show the data.

We are showing a map, loading data from an API call, and showing that data on the map.

Lots of GitHub organizing.

Gantt chart ready.

Tasks for this week:

Everyone is to take items from the Issues list as they are able to work.

Goal to add trash reports from the map, show those reports, and view the full details.

This should be done in time for the demo next week.

We also need to work on the slides and a basic script.
